

COVERT TOWNSHIP

Covert Township Police Station was facing a critical challenge due to the outdated surveillance system. The existing camera was dysfunctional, rendering the police station vulnerable to security breaches. The system was originally installed by a person who had since relocated, leaving the department without technical support or maintenance services. The primary goal was to ensure secure and reliable video and audio recording of interviews and key evidence, while also providing the necessary training for seamless operation. ●

CHALLENGES

- Limited capabilities for recording and securely storing interview sessions and evidence per CJIS requirements.
- Lack of restricted physical access to critical video recording equipment, compromising the chain of evidence.
- Need for proper training to ensure efficient operation and data management by the law enforcement team.

CONCLUSION

Improved Evidence Collection:

The installed surveillance camera and video recording equipment facilitated the seamless capture and preservation of critical evidence, enhancing the integrity of investigative processes.

Enhanced Security: Restricted physical access to the video recording equipment ensured the integrity and security of recorded data, meeting the stringent requirements for maintaining the chain of evidence in legal proceedings.

Empowered Law Enforcement: The comprehensive training provided to the Chief of Police empowered the law enforcement team to effectively handle and manage the recorded data, contributing to greater operational efficiency and confidence in utilizing the implemented technology.

SOLUTIONS

Surveillance Camera Installation:

A high-quality surveillance camera was strategically installed in the Interview Room, positioned on the ceiling in the corner to ensure optimal view and audio recording during interviews. This provided law enforcement personnel with a reliable and unobtrusive means of capturing crucial evidence and discussions.

Video Recording Equipment Installation

Advanced video recording equipment was placed inside the main floor evidence vault. Access to this equipment was restricted solely to the Chief of Police and the Detective, ensuring the preservation of the chain of evidence while also safeguarding the integrity of recorded data.

Training and Support

Comprehensive training sessions were conducted for the Chief of Police to familiarize them with accessing, operating, and downloading recordings as required for official police business. This training empowered the law enforcement team to effectively manage and utilize the installed technology, enhancing their operational efficiency.
