

LONDON TOWNSHIP

Black Rock Technologies partnered with London Township to install advanced access control systems and multiple indoor and outdoor security camera on their premises to bolster security measures and manage access to specific areas effectively.

CHALLENGES

Before our involvement, London Township encountered multiple obstacles that required expert attention and strategic solutions:

- Outdated security systems that were inadequate in ensuring proper access control and comprehensive security coverage across their facilities.
- The malfunctioning security cameras presented a significant risk to both the building's security and the integrity of the upcoming election.

SOLUTIONS

Door Readers with Video Intercoms

Installed an access control door reader with a video intercom on the Township Office main entrance. The team integrated the video intercom system with the existing access control infrastructure, configured the system for live communication and visual identification, and then tested and commissioned the system to ensure seamless operation and proper integration.

Upgraded to Advanced Security Cameras

Seven outdoor cameras were installed on the exterior of the building and two indoor cameras were installed on the interior of the building. The team integrated the cameras with the access control system for centralized control and conducted detailed testing to guarantee proper functionality.

Installation of Network Video Recorder

Installed a Network Video Recorder (NVR) with 8TB drives, providing up to 365 days of video footage. Conducted detailed testing to guarantee proper functioning and integration.

Running All Necessary Cable

To uphold dependable system connectivity and functionality, Black Rock Technologies meticulously planned, routed, and labeled all essential cables for camera and access control systems. Following industry standards, we ran Ethernet and power cables to interconnect various components, ensuring orderly management and organization.

CONCLUSION

Through strategic planning, meticulous installation, and diligent project management, Black Rock Technologies successfully transformed London Township's security infrastructure, providing a tailored access control system that aligns with their needs. The collaboration between Black Rock Technologies and London Township has not only fortified security measures but also strengthened the partnership, reflecting our commitment as technology experts and trusted partners in our clients' success.

THE BRT DIFFERENCE

- **Personalized Service Approach:** Our team developed a deep understanding of Travis Pointe's operational needs and challenges, allowing us to tailor our services for optimal outcomes.
- **Strategic IT Planning:** We worked closely with Travis Pointe to devise a strategic IT roadmap, aligning technology initiatives with their business goals.

BENEFITS

Enhanced Access Control

Black Rock Technologies' security solutions have empowered London Township to effectively regulate access to specific locations within their premises.

Strengthened Surveillance Capabilities

The implementation of a robust access control system has equipped London Township with heightened surveillance capabilities to monitor activities across their premises.

Improved Security Measures

London Township now benefits from enhanced security measures that ensure the safety of employees and protect valuable assets within the facility.

Streamlined Access Management

Our service has enabled London Township to streamline access management processes, enhancing operational efficiency and security within the organization.
